                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (PSGL-1) binding protein. The protein is a member of the selectin liquand interactor cytoplasmic (SLIC-1) family. The SLIC-1 polynucleotides and polypeptides are useful as targets for developing modulating agents to regulate a variety of cellular processes such as signal transduction, cytoskeletal organization, immune and inflammatory responses, interand intra-cellular communication, adhesion, migration, cell activation,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         source of (anti)sense oligonucleotides, for recombinant production of polypeptides, and in screening for interactive compounds. The polypeptides are used to raise specific antibodies which useful for diagnostic detection or purification of IBD1 and IBD1prox, to screen for specific binding agents, potential therapeutic agents. The IBD1 and IBD1prox polynucleotides and polypeptides are useful for treatment and prevention of inflammatory and/or immune diseases or cancer, where associated with mutations in genes corresponding to IRD1 and IRD1prox, especially cryptogenetic inflammation of the intestines (hemorihagic rectocolitis, Crohn's disease and Blau syndrome).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          inflammatory disease. The IBD1 gene is probably involved in regulation of apoptosis and activation of NF-kappa B. The IBD1 and IBD1prox polynucleotides are is useful as source of probes and primers, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a human protein designated IBD1prox. The IBD1prox protein is in proximaty to a gene encoding inflammatory bowel disease 1 (IBD1) protein, which is associated with intestinal

cc antipsoriatic; antiparkinsonian; notropic; immunosuppressant; corresponding; anticonvulsant; antiarthritic; immunosuppressant; cimmunostimulant; cardiant; thrombolytic; coagulant; vasotropic; coagulant; vasotropic; cimmunostimulant; cardiant; thrombolytic; coagulant; vasotropic; communostimulant; hypotensive; dermatological; immunosuppressive; coantiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; coagulant; hypotensive; dermatological; immunosuppressive; coantithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an OPFX-associated disorder. The nucleic acids can be used to express OPFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritts, graft vs host disease, cardiovascular disease, diabetes mellitus, typertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, allocaterial or fungal infection, malaria, autoimmune disorders, asthma, collectrial or fungal infection, malaria, autoimmune disorders, asthma, concturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
